

DATA, ANALYTICS & PRODUCT LEADER

Senior data, analytics, and product leader with 9+ years of experience translating business strategy into analytics, reporting, data products, and technology solutions across financial services, healthcare, and government programs. Experienced leading cross-functional teams of analysts, engineers, and business partners, defining requirements and roadmaps, prioritizing work, managing delivery risks and dependencies, and partnering with senior stakeholders from discovery through implementation. Brings a hands-on foundation in SQL, business intelligence, data quality, root-cause analysis, and enterprise reporting.

LEADERSHIP & ANALYTICS EXPERTISE

Analytics & Product Leadership: Product Strategy • Roadmaps • Data Products • Analytics Products • Prioritization • Cross-Functional Leadership • Process Improvement • Requirements • User Stories • Stakeholder Alignment • Technology Delivery • Release Readiness • Executive Communication

Analytics & Strategy: Business Analytics • Business Intelligence • KPI Development • Root Cause Analysis • Trend Analysis • Operational Analytics • Data Quality • Data Validation • Data Reconciliation • Self-Service Reporting

Reporting & Technology: SQL • Python • Power BI • Tableau • MicroStrategy • Excel • Alteryx • Snowflake

Delivery & Governance: Requirements Management • Technical Delivery • Portfolio Management • Backlog Management • Technical Documentation • Business Rule Translation • Quality Assurance • Data Governance • Agile • JIRA • SAFe PO/PM Training

Citibank – Dallas, TX

***Vice President – Data/Information Mgt Lead Analyst* | February 2025 - Present**

- Lead a portfolio of 36 data and control-automation initiatives to date, including 10 currently in active automation, coordinating work across 4+ business and technology teams.
- Partner with Markets Controllers, Automation Champions, developers, and business stakeholders to translate operational control requirements into scalable technical solutions, regularly coordinating with 10+ business and technology partners across concurrent initiatives.
- Provide analytical and technical leadership throughout the delivery lifecycle, from requirements clarification and data discovery through technical design, testing, implementation, and post-production validation.
- Lead resolution of complex data and technology dependencies by evaluating alternative source systems, engaging technology and business teams, researching APIs and enterprise data assets, and escalating unresolved access, funding, or infrastructure constraints with documented options and business impact.
- Improved technical-design quality by replacing ambiguous narrative specifications with detailed pseudocode, transformation logic, and validation criteria, reducing interpretation gaps and follow-up questions from developers.
- Assess initiative readiness and determine when requirements, data availability, access, or technical dependencies require additional grooming, remediation, escalation, or leadership decision before work proceeds to development.
- Identify operational, delivery, and data-quality risks early by evaluating requirements, data availability, technical dependencies, and implementation constraints and recommending more sustainable approaches.
- Navigate complex enterprise data environments containing millions of records across multiple warehouses and source systems, independently researching metadata, infrastructure documentation, reports, procedures, and data dictionaries to identify authoritative data elements for automation and validation.

- Lead investigation and resolution of complex data-quality and reporting issues by profiling datasets, tracing source systems, validating business rules, and identifying root causes.
- Review technical logic and automation outputs to ensure implemented solutions accurately reflect approved business requirements and expected results.

Goldman Sachs - Dallas, TX

Sr. Associate – BI Reporting Intelligence | February 2024 – February 2025

- Led and mentored a team of two analysts responsible for developing and automating risk-management controls and data-quality validations.
- Provided analytical leadership in the assessment of control performance, data exceptions, risk indicators, and operational trends across business functions.
- Guided analysts in developing Alteryx-based validation rules to identify missing records, invalid values, data exceptions, and control failures requiring investigation.
- Reviewed analytical findings and supported root-cause investigations to identify process, control, and data-quality improvement opportunities.
- Partnered with control owners and cross-functional stakeholders to define monitoring requirements, evaluate risk, and implement improvements.
- Developed and automated reporting and validation solutions using SQL, Python, Alteryx, and business-intelligence tools.

Maximus Inc - Remote

Sr. Analyst – Analytic Solutions Delivery | April 2022 – February 2024

Product Owner – Data & BI Delivery | April 2023 – February 2024

- Led an Agile team of 6 developers, engineers, and data analysts delivering BI, reporting, and data-product solutions supporting government-services programs.
- Developed and maintained product and delivery roadmaps defining business need, scope, milestones, dependencies, risks, testing, and release-readiness activities across development, UAT, and production.
- Partnered with business stakeholders and Engineering to gather and prioritize requirements, translate business objectives into user stories and technical deliverables, and coordinate delivery across multiple workstreams.
- Led current-state and future-state analysis for reporting and data-platform initiatives involving ETL changes, Snowflake-based data structures, dashboard impacts, testing, and production migrations.
- Managed enhancement requests, defects, delivery risks, dependencies, and stakeholder communications while providing senior leaders with status, tradeoffs, and recommended next steps.

Data Analytics & Reporting – Individual Contributor | April 2022 – April 2023

- Built and maintained Power BI and MicroStrategy dashboards and operational reports for government state programs and contact-center leaders, translating business needs into actionable KPIs and reporting solutions.
- Gathered reporting and analytics requirements from business stakeholders, investigated metric discrepancies, and performed root-cause analysis on data issues affecting call-center and program reporting.
- Built curated datasets supporting self-service analytics and scheduled MicroStrategy reporting, improving access to consistent operational data for internal and external stakeholders.
- Validated newly ingested and transformed data by reconciling source-to-report results, checking completeness and accuracy, and identifying data-quality issues before downstream reporting use.
- Used SQL, Excel, Power BI, MicroStrategy, and Snowflake to analyze trends, troubleshoot reporting issues, and deliver recurring and ad hoc insights to business and program leadership.

Maximus Inc - Remote

Business Analyst | March 2021 – April 2022

- Partnered with senior leadership and functional teams to define and execute high-impact data models, driving organizational insights.
- Delivered strategic reports and analyses to senior executives, utilizing Power BI and Excel to drive targeted operational improvements.
- Automated and maintained key reporting processes using Power BI, and MicroStrategy, improving efficiency and data accessibility.

American First Finance - Dallas, TX

Operations Analyst | October 2019 – March 2021

- Developed executive dashboards and operational reports in Power BI, SQL, and Excel to monitor customer behavior, marketing performance, portfolio health, and call center KPIs.
- Conducted business analytics to identify trends, customer behavior patterns, and operational opportunities that supported strategic decision-making.
- Performed root cause analysis on KPI fluctuations, complaint trends, and operational outliers to identify data quality issues and recommend business process improvements.
- Designed complex SQL queries to analyze credit program performance, marketing campaign effectiveness, customer segmentation, and operational trends.
- Partnered with business leaders to evaluate marketing initiatives, measure campaign performance, and provide actionable recommendations based on analytical findings.
- Validated and reconciled data across multiple systems to improve reporting accuracy and ensure data integrity.
- Presented insights and executive-level reporting that enabled leadership to make data-driven operational and business decisions.

Maximus Inc – Remote

Reporting Analyst | May 2018 – October 2019

- Developed and maintained SQL-based operational and executive reports to monitor KPIs, call center performance, and business operations.
- Conducted root cause analysis to troubleshoot reporting issues and validate data accuracy across multiple systems.
- Partnered with business analysts to gather reporting requirements and translate business needs into automated reporting solutions.
- Improved reporting efficiency by automating recurring reports and reducing manual reporting processes.
